Abstract:

This study is a significant contribution to the field of attributes of boutiques stores and their relationship to automation marketing. This study aim to examine the association of customer relationship attributes of boutique stores in Chennai study. Marketing automation provides to understand and know the potential customers, automating the techniques of stimulating sales performance of boutiques stores. Boutique shops automation marketing actions that bring future prospects of business. Marketing automation helps by improving the better efficiency of sales automation, quick development on customer retention and in turning a broad base of leads into happy customers using a combination of tactics. This study examines empirically how consumers' relationship towards boutique stores influenced by demographic, situational and technical attributes. This study focused about that analyses of improve the customer relationship with boutique stores automation marketing factors, store automation, customer retention, lead generation and promotional schemes by latest customer relationship software, customer service and significantly influence the customers. Moreover, this research paper provides the scope of factors influencing boutiques attributes towards customer relationship and automation marketing.

Key words: Boutiques attributes, automation marketing, customer relationship

KANMANI. J and Dr. M. KAVITHA (March 2023). A STUDY- INFLUENCING FACTORS OF AUTOMATION MARKETING ON BOUTIQUE STORES International Journal of Economic Perspectives, 17(03) 128-138 UGC CARE Retrieved from https://ijeponline.com/index.php/journal Introduction:

The main aim of this research paper is to identify factors influencing on boutique retail stores and their impact on marketing automation systems. The paper shows that marketing automation techniques and processes is helps to improve the efficiency of sales margin and customer relationship of boutique retailers. The researcher has indentified the influencing factors and tools that increase the efficiency of activities involved in marketing automation. Marketing automation is a fuel to operate the modern business and totally makes the new changes in business scenario. In recent days, marketing automation tools and software's facilitate to retain customers and make effective communication to customers, and follow up and tracking a prospective customers, to know the customer buying pattern and their interests and preference, to develop the strong customer base with them and hold their data for future development and contact.

Review of literature related to automation marketing

Randolph Bucklin, Donald Lehmann, and John Little first introduced the idea of marketing automation in 1998. Their paper from decision support to decision automation: A 2020 vision gave the academic world a glance of how marketing automation will change the marketing field. Before the supporting systems of marketing were mainly helping the marketing managers to make better decisions. (Neslin, 1994) Bucklin et al. (1998) suggested that supporting systems that before were helping the managers are transforming to mainly automated systems, thus the work of marketing managers is going towards rule perfecting for automation and the focus will be targeted for greater decision making. Later on Little (2001) introduced the term marketing automation in his presentation in 5th Invitational Choice Symposium and from that on the marketing automation has been referred among marketers. Marketing automation, in general, complements interactive and direct marketing with the help of automation and further on in CRM and email marketing. Thus, a clear descriptive figure can be shown of the marketing automation process. Heimbach et al. (2015).S SayeedaJabeen, M Kavitha (2019)A study on customer preferences on Green Marketing. Research Gate. emphasis significance of Green Marketing in developing countries, factor comparison with the actual trend and sustainable impact on the marketing procedure of the dynamic society. Customer satisfaction level and the industrial presence to make a move towards the dynamic changes is measured. The automated marketing process is corresponds the normal marketing management process but includes the automation part. At first, the data analysis is done, and the status quo is determined. The possible objects that can be fulfilled are derived, and the set of automated actions are done. Then the data acquired is analyzed and further decisions concerning marketing campaigns are made. (Hiembach, 2015).

KANMANI. J and Dr. M. KAVITHA (March 2023). A STUDY- INFLUENCING FACTORS OF AUTOMATION MARKETING ON BOUTIQUE STORES International Journal of Economic Perspectives,17(03) 128-138 UGC CARE Retrieved from https://ijeponline.com/index.php/journal OBJECTIVES OF THE STUDY

- 1. To examine the process of automation marketing to boutique and retail outlets in Chennai city.
- 2. To analyses the influencing factors of boutique and retail attributes and customer relationship.

HYPOTHESES OF THE STUDY

- 1. Hypothesis (H_o): There is no association between respondent profile and boutiques stores attributes.
- 2. Hypothesis (H_o): There is no association between respondent profile and influencing factors of boutique shop.

Methodology

Research designThis research deals with the descriptive research. Descriptive research includes surveys and fact finding enquiries of different kinds. The major purpose of descriptive research is to find out the state affairs, as it exists at present. Descriptive research studies are concerned with describing the characteristic of a particular individual or a group.

Data - Primary and secondary

Sampling method: convenient sampling method

Sample size 300

Sampling area and Respondent: Boutique retail stores in Chennai City, Data sources were collected from managers, executives, supervisors and organized boutique retail stores in the Chennai city.

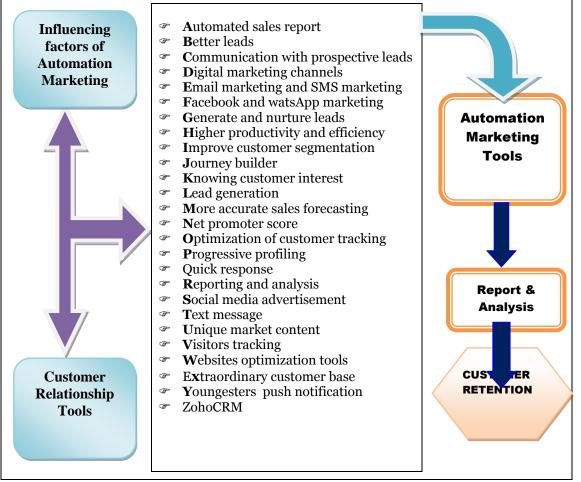

Data analysis: Chi-square test and Factor analysis

Development of Automation marketing attributes on boutiques Stores

Marketing automation provides a greater scope of business growth and widening the best opportunities for businesses. Automation marketing attribution is the way to assess how different marketing campaigns have contributed to reaching the business at desired level and bring fruitful outcomes. In multi-channel marketing activities were developed in the sequence of automation marketing attributes is helps the business to analyses the performance and growth. Automation marketing has a wide range of services provides and engaged automated marketing activities such as: Lead generation, Lead scoring, Paid advertising, Customer relationship management (CRM), Marketing analytics, Social media planning, etc., automation marketing attributes, channel, functions, activities, reporting, analyses and factors allows significant contribution to the field of customer relationship and retention. The researcher also develops the various influencing factors of automation marketing and customer relationship software and attributes of boutiques stores. Hence, this research objective is aim to analyses the association between respondent profile automation marketing attributes, customer relationship and automation marketing factors.

KANMANI. J and Dr. M. KAVITHA (March 2023). A STUDY- INFLUENCING FACTORS OF AUTOMATION MARKETING ON BOUTIQUE STORES International Journal of Economic Perspectives,17(03) 128-138 UGC CARE Retrieved from https://ijeponline.com/index.php/journal CHI- SQUARE ASSOCIATION TEST

The relationship of the factors which determines the priority in the store attributes of consumer was tested. The Chi-Square association statistics was used at 5% level of significance by assuming the general hypothesis

Hypothesis (H_o): There is no association between personal details and boutique retail stores attributes on automation marketing

From the above table describes the results of Chi-square analysis in terms of personal factors (consumer profile) gender, age, education and occupation Chi-square values, p values and their significance on the various factors of automation marketing on boutique store attributes in Chennai city.

Chi-square Association Analysis:

All the personal factors considered to have significant influence on the stores attributes of organized and unorganized retail outlets.

Boutique organized retail outlet: Gender, age, education and occupation have a significant influence on automation marketing store attributes such as Communication with prospective leads, Email marketing and SMS, Net promoter score, Optimization of customer tracking, Progressive profiling, Text message, Visitors tracking and Extraordinary customer base. All the personal factors are considered to have no significant influence on the other automation marketing tools on boutique stores attributes.

FACTOR ANALYSIS – BOUTIQUE STORES ATTRIBUTES OF AUTOMATION MARKETING Key boutique Store attributes (A-Z) format that determining customer relationship

The above objective can be achieved by applying factor analysis by taking organized boutique retail outlets automation marketing factors as dependent variable and boutique store attributes of automation marketing mentioned in the below table as independent variables. However, in the current study, these independent variables were found to be highly correlated distorting the regression results. Therefore, we used the factor analysis to reduce these total 26 variables into 5 uncorrelated representative factors.

However, due to large number of boutique store attributes of automation marketing, the results appear to be vague and interpretation difficult. Therefore, these 26 variables have transformed into small number of representative factors through factor analysis as below.

| Table 3- KMO and Bartlett's Test | | | Organized retail | Unorganized retail | |

Factor Analysis: Rotated Component Matrix

The table 4 displays rotated component matrix and reports the factor loadings for each variable on the components or factors after rotation. Each number represents the partial correlation between the item and the rotated factor. These correlations can help us formulate an interpretation of the factors or components. This is done by looking for a common thread among the variables that have large loadings for a particular factor or component. Factor analysis rotation methods start with the original axes and apply a mathematical rotation which simplifies the relationships between factors and variables.

Source : primary data**Extraction method: principal component analysis. Rotation Method: Varimax with Kaiser Normalization.

Exploratory factor analysis: For analyzing the data, 26 variables were subjected to factor analysis using PCA (principal component analysis). The KMO was measured at, 0.523 (Table 4..28). Using the criteria of an Eigen value greater than 1, Seven Factors emerged, accounting for 81.80% of the total variance (Table: 4). As is common practice, a Varimax rotation with Kaiser Normalization was performed to achieve a simpler and theoretically more meaningful factor solution; it is clear from the factor loadings (in the table 4.30) that seven factors are grouped into the following factor names, likely

Boutique store attributes of automation marketing

Factor 1 Lead generation Marketing Automation: From the factor analysis is emerged that, lead generation contributed to the highest degree of variance (4.462). Lead generation is the process of retaining the interest of potential customers to increase future sales. **Factor 2 Visitors tracking Marketing Automation**: The second factor contributed to the lowest degree of variance (3.429) than factor 1(**Lead generation Marketing Automation**). Visitor tracking is one of the most important techniques to know customers to visits our websites. When new people visit our website for various purposes but automation marketing is a facility to collect new customer's data. Visitors tracking is facilitate to organize customer data and an opportunity to convert customer data for future purpose. **Factor 3 Social media advertisement:** The third factor pertains to the social media advertisement with regard to managing customer relationship by using latest CRM software, it is contributed to the lowest degree of variance (3.271) than factor 2 (**Visitors tracking Marketing Automation**). **Factor 4 Higher productivity and efficiency:** The Fourth factor groups into the higher

International Journal of Economic Perspectives,17(03) 128-138 UGC CARE Retrieved from https://ijeponline.com/index.php/journal

productivity and efficiency. This factor is contributed to the lowest degree of variance (2.743) than factor 3 (Social media advertisement). Factor 5 Automated sales report: The fifth factor contributed to the lowest degree of variance (2.691) than factor 4 (Higher productivity and efficiency). Factor 6 Digital marketing channels: The sixth factor contributed to the lowest degree of variance (2.355) than factor 5 (Automated sales report). Factor 7 Email and SMS marketing: The last factor loaded in the Email marketing and SMS refers to sending marketing messages directly to your customers' email inboxes. This may refer to direct marketing messages about sales or events, but it can also include things like newsletters, customer re-engagement emails, and abandoned cart summaries. SMS marketing and email marketing are both permissions-based.
